

Blank Out

Lane Control, Regulatory and Warning Signs

Key Features

Solid State Technology for extended LED life

Continuous dimmers for maximum visibility

MUTCD and custom displays

Blank Out LED Sign

Lane Control LED Sign

MUTCD LED Sign

Custom Designs Available

By capturing the attention of drivers more effectively than standard signs, Blank Out, Lane Control, Regulatory and Warning Signs are a great solution to your transportation needs. These signs use LEDs that meet ITE standards and have white or clear lenses. Each LED is wired independently. With a projected life of 50,000 hours, our signs automatically adjust brightness according to current light conditions. We can make standard MUTCD displays or any custom design you choose.

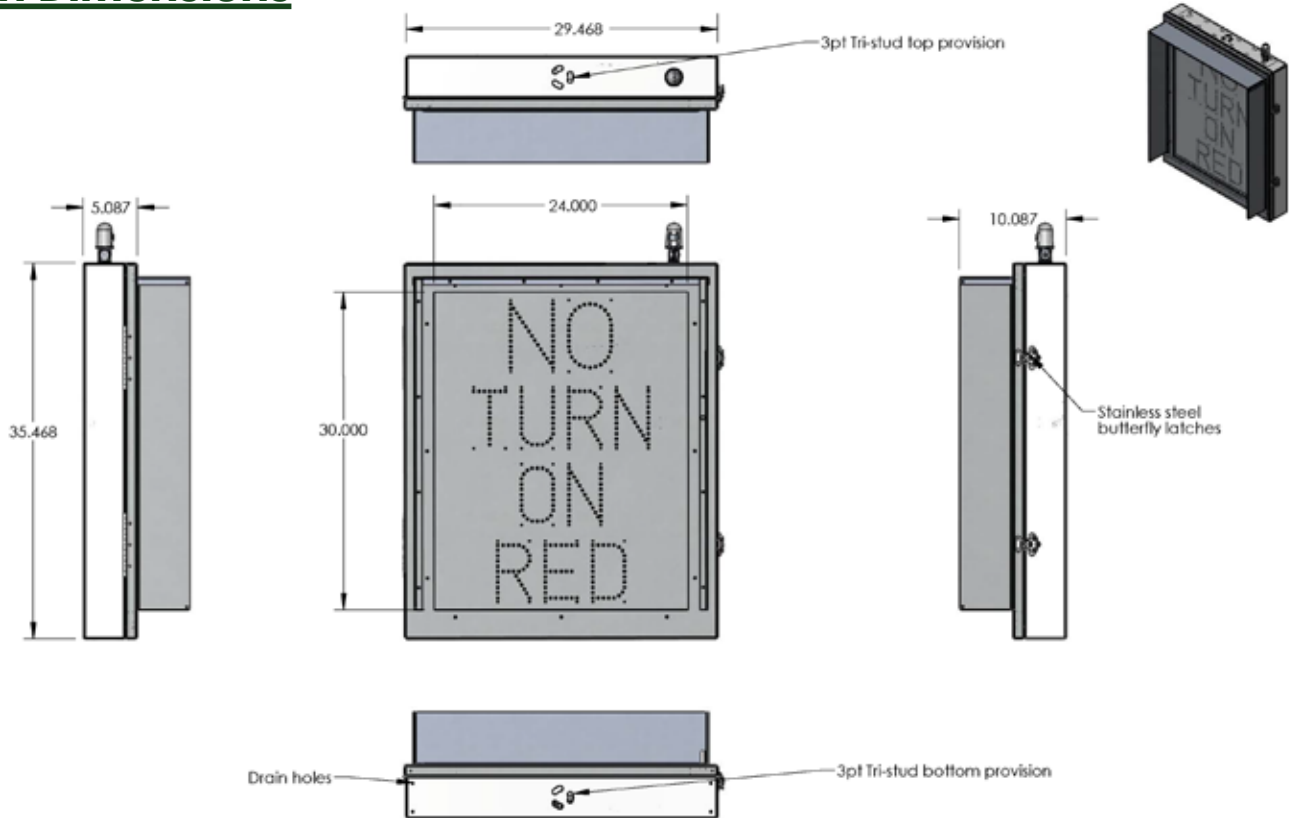

The body and door frame uses .125" thick, 5052-H32, marine-grade aluminum that is continuously welded for superior strength and weather protection. This allows our signs to withstand 110 mph winds. The frame comes with a standard black satin powder-coated finish, but we offer other options as well.
