Standard Type CP

Custom Designs Available

These signs are housed in a traffic style continuously welded aluminum housing with strong polycarbonate sign faces. This construction is rated to withstand 150 MPH winds. The LEDs are rated to maintain 70% of the initial brightness for 60,000 hours or 13.7 years (at 12 hours per day). A double sided sign with a viewable area of 6' x 21" consumes only 26 watts of electricity or just under 114 kWh per year which translates to less than \$8.00 annually (assuming 7 cents per kWh). Consequently, these signs may qualify for federal energy saving funding is used to replace older fluorescent signs.

Other benefits include:

Easy to replace the sign face while in field

Easy to install

Even light distribution

FDOT approved

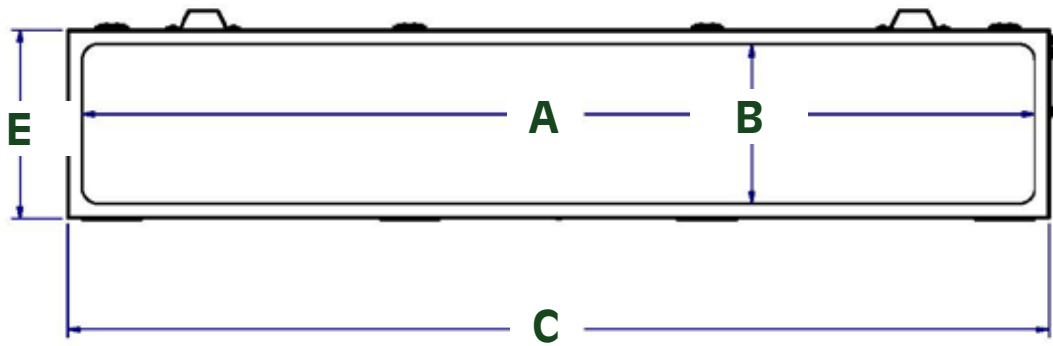

Multiple mounting options to choose from
